Wound Management Case Study #6

Veterinary Case Study: Use of Sil.Vet in Periocular Wound Treatment and Suturing

Patient Information:
Species: Horse Wound
Location: Near the right eye (periocular region)
Procedure: Wound cleansing, surgical closure (suturing), and post-operative care
Product Used: Sil.Vet Solution - Wounds & Burns Management
Clinical Overview: A horse presented with a laceration near the eye, a delicate and high-risk area prone to infection and visible scarring. A veterinarian opted for Sil.Vet to manage the case before, during, and after wound closure. The objective was to ensure a sterile field, prevent post-operative infections, reduce discomfort, and support better tissue recovery with minimal scarring.

Pic.1 - Initial Condition (Before Treatment)

Treatment Protocol:	Pictures

Step 1: Wound Preparation

The wound was thoroughly irrigated with Sil.Vet using a syringe for controlled, non-aggressive cleansing.
Antimicrobial preservative action ensured without harming sensitive tissues.

Pain relief noted, with the horse remaining calm.

Step 2: Surgical Closure (Suturing)

SilVet reapplied before suturing to minimize SSI risk.
Clean, moist peri-wound area supported tight closure.

Step 3: Post-Closure Care

Post-suturing, Sil.Vet was applied to maintain a moist healing environment.

Supports epithelial migration, granulation, and cosmetic healing

Wound Management Case Study #6

Veterinary Case Study: Use of Sil.Vet in Periocular Wound Treatment and Suturing

Outcomes & Benefits Observed:

- Safe for use near the eyes and mucosal regions - Excellent antimicrobial properties without cytotoxicity
- Promotes tight wound closure and accelerated healing - Reduces post-surgical infection (SSI)
- Minimizes pain and inflammation
- Supports healthy tissue regeneration and improved cosmetic outcome
- Enhances hair regrowth around the wound

Veterinarian's Note:

“Sil.Vet is a game changer in equine wound care. It is safe, effective, and easy to use-even in sensitive zones like the face. Healing is smoother, cleaner, and faster, with visibly better results compared to traditional antiseptics and ointments."
